

# EPP Agent

DESKTOP APP

## PROJECT BRIEF

The EPP Agent helps users monitor and manage the security status of their device in real time. It provides visibility into endpoint protection, security compliance, and system health, ensuring the device remains secure against threats.

## PROBLEM STATEMENT

The existing design lacked sophistication and user-friendliness, so we redesigned the EPP Agent experience to better align with user expectations and improve usability.

## SOLUTION

Identified usability issues in the existing design and proposed a modern solution to improve the overall user experience.

## BUSINESS OBJECTIVE

- Contemporary look and feel design
- Improve User Experience

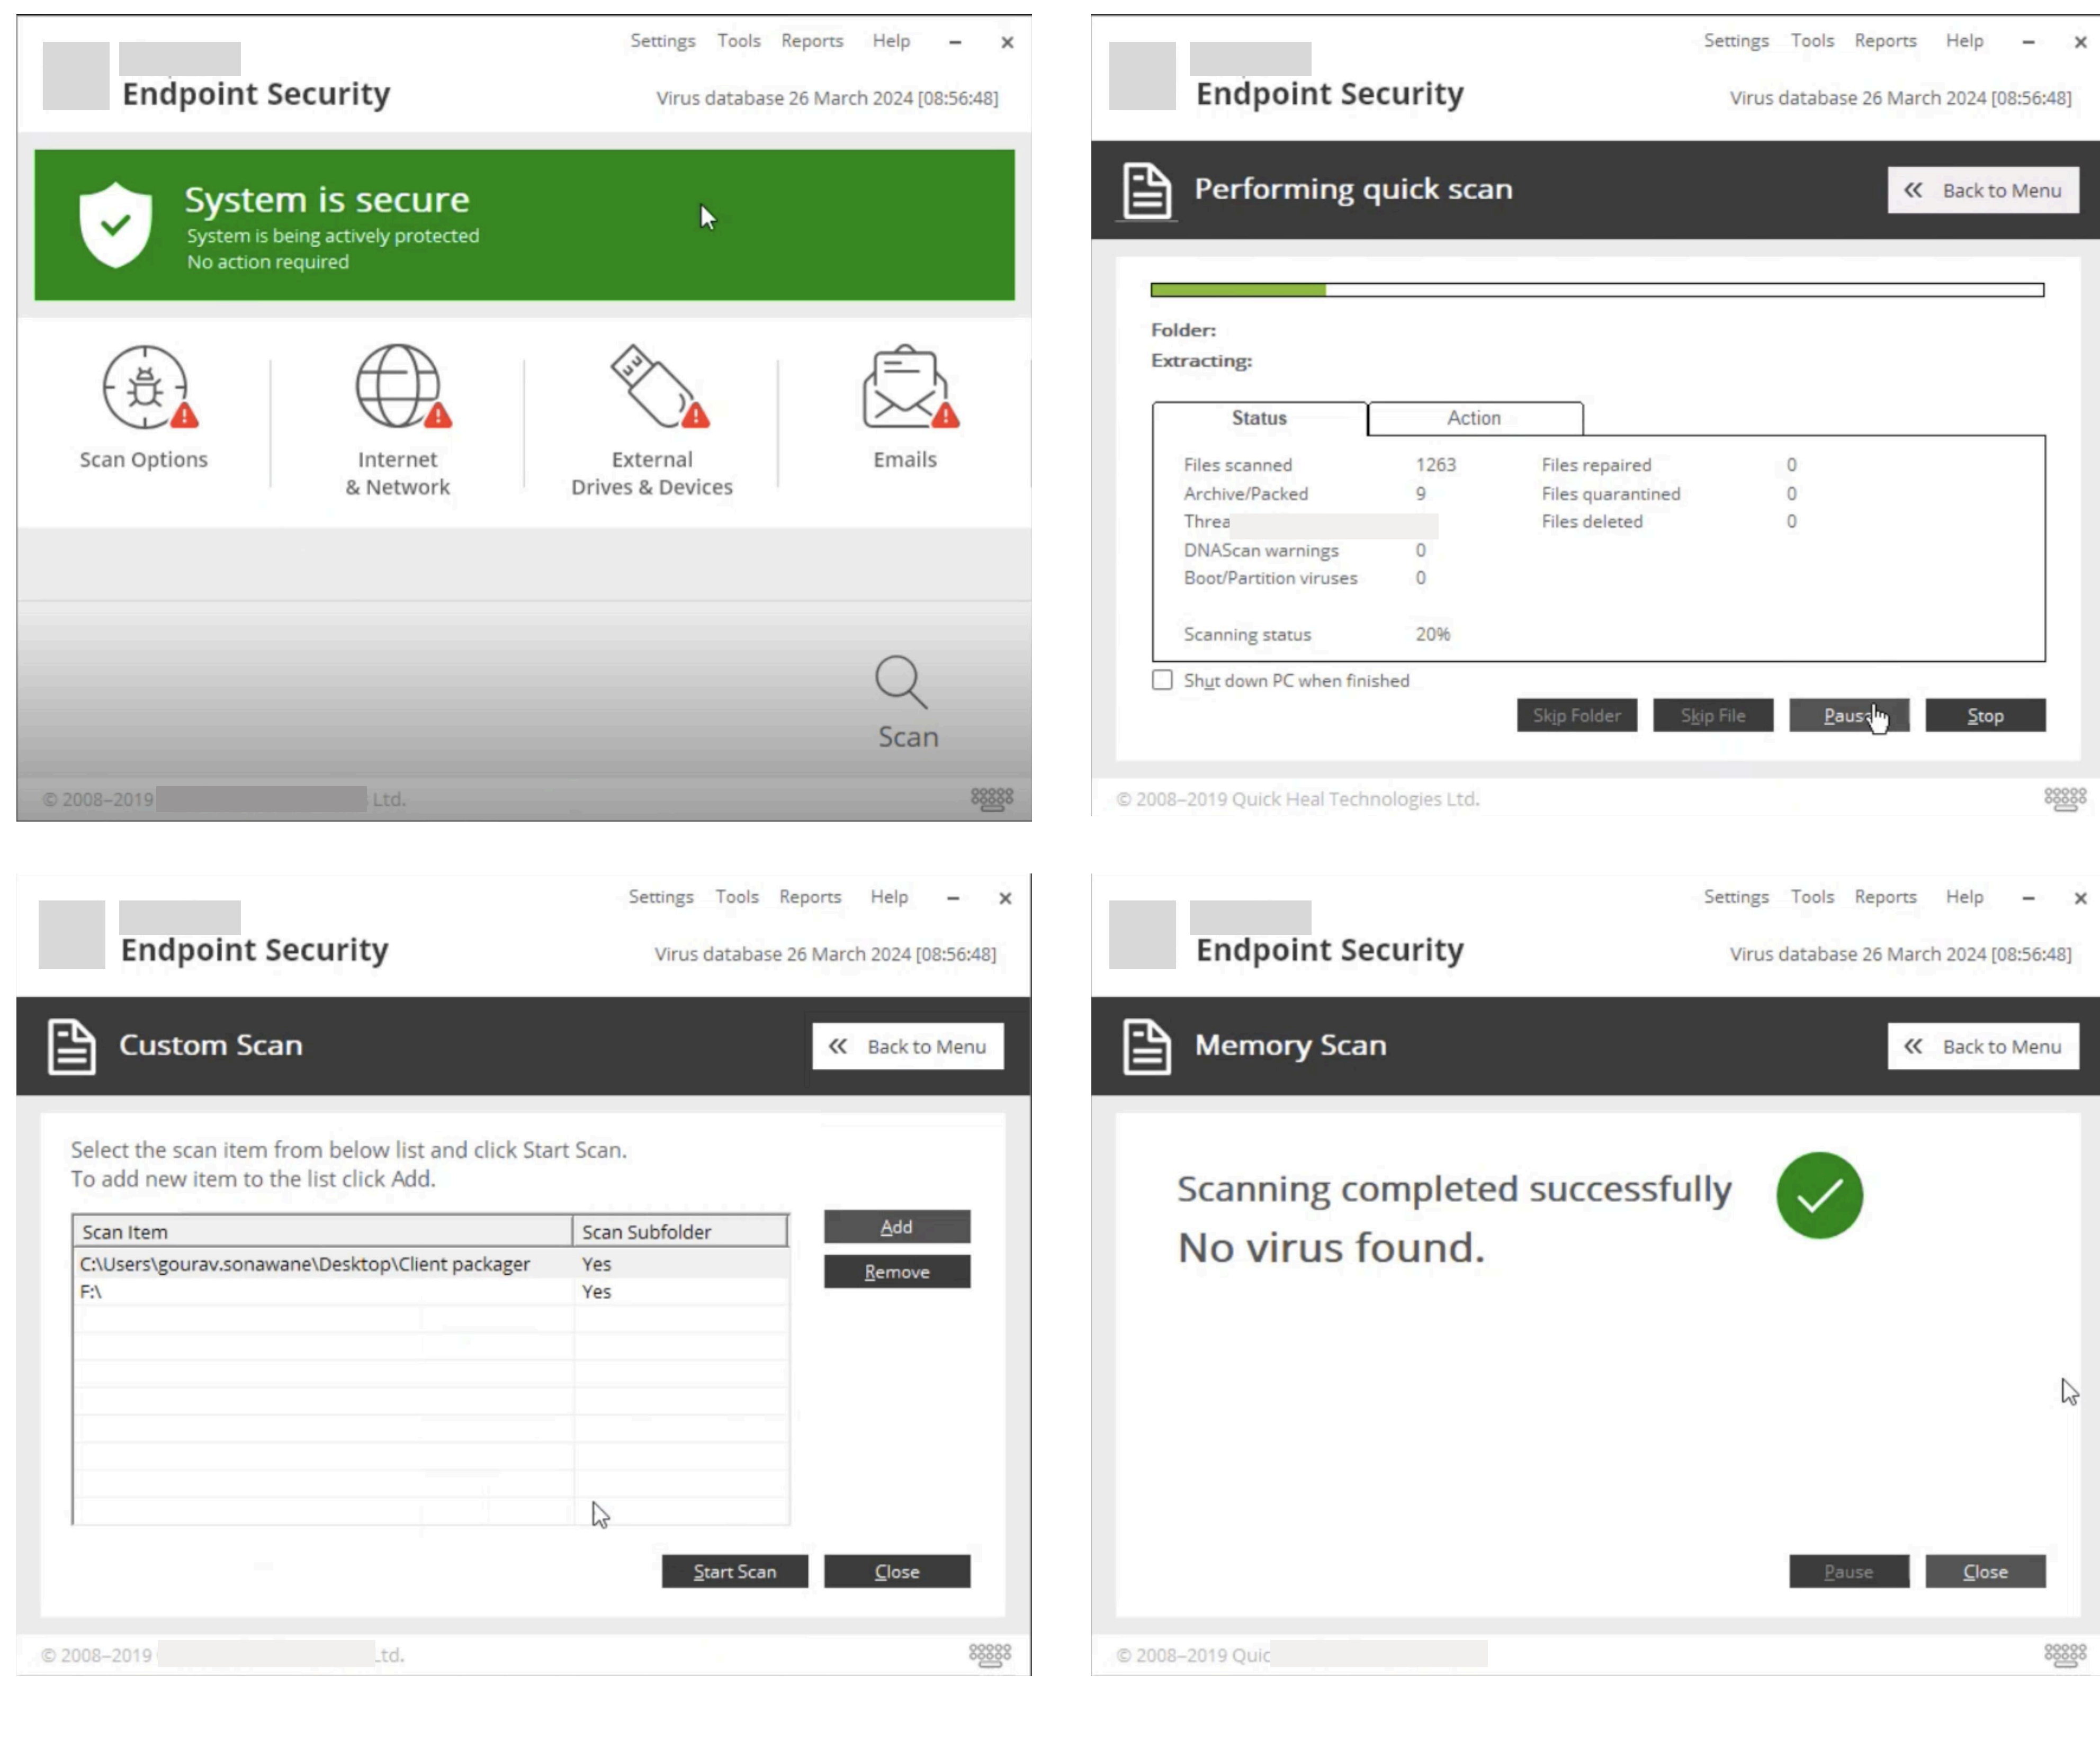

## KNOW THE USER

As part of the design process, I gathered insights from stakeholders to understand user types, their tasks, and usage contexts. Based on these insights, I designed an intuitive desktop application experience.

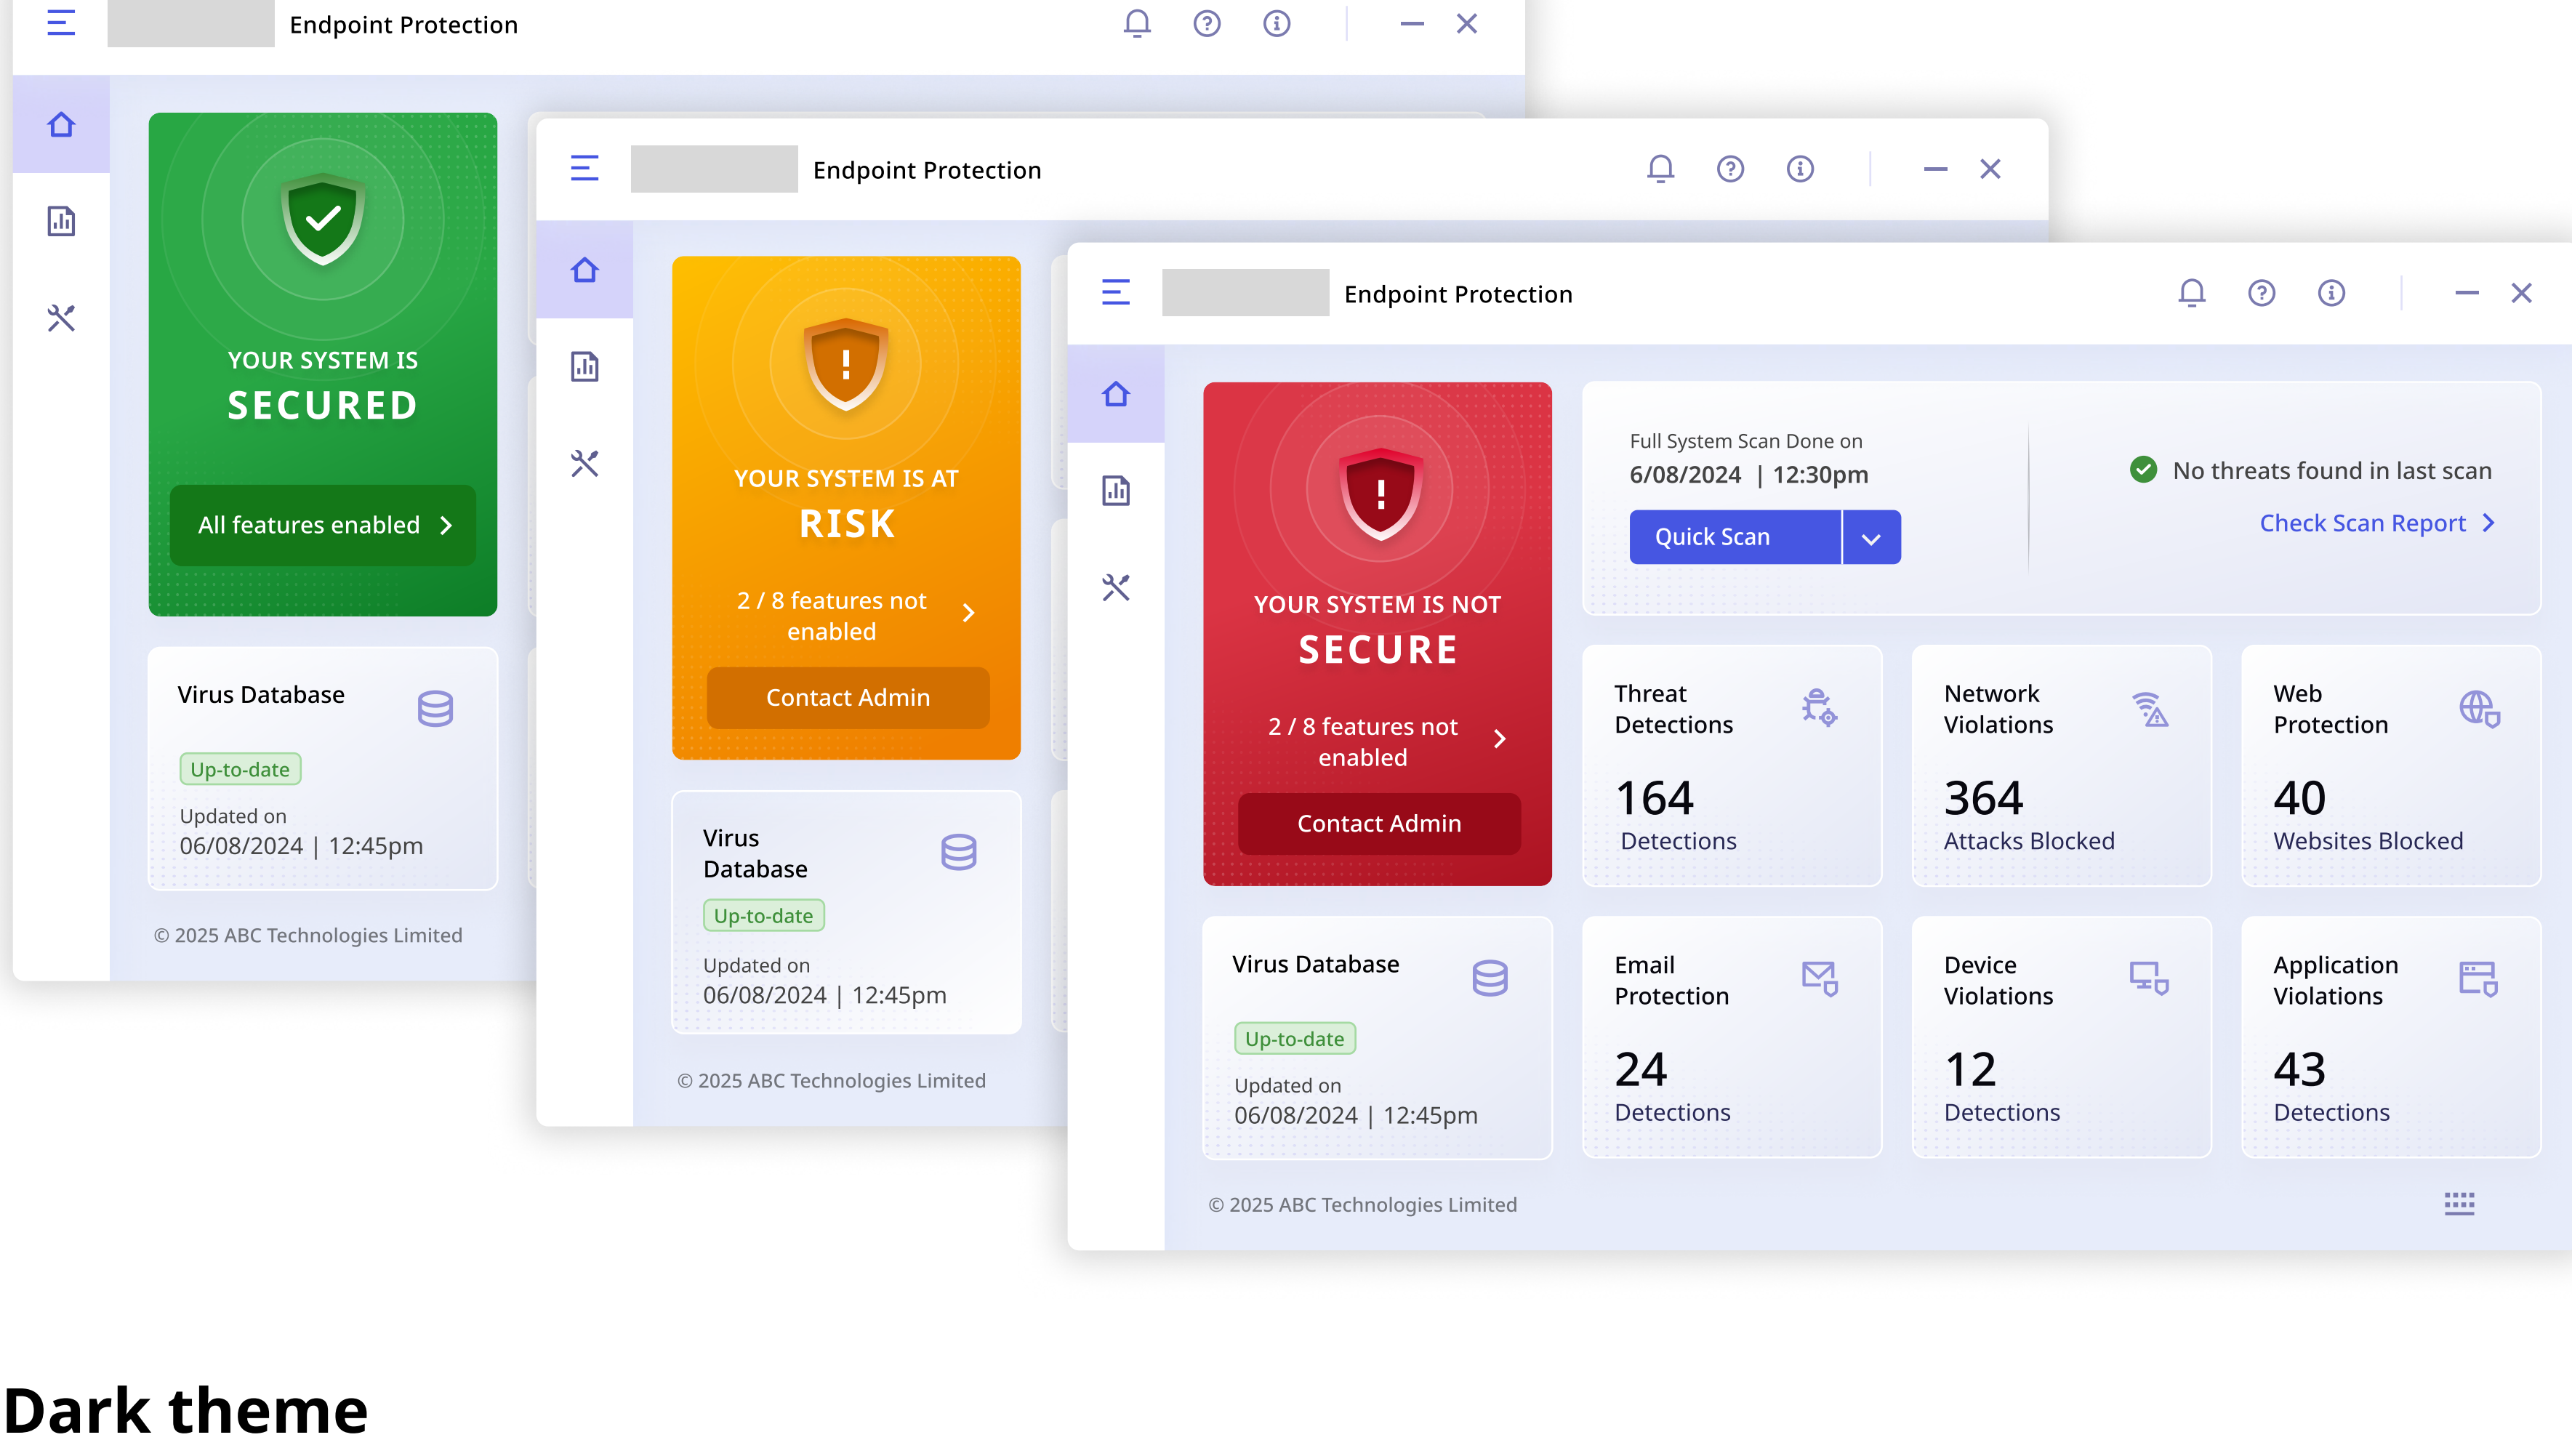

## BUILT THE DESIGN LANGUAGE

We created a style guide to maintain consistency across all products and to support clear communication among desktop product owners.

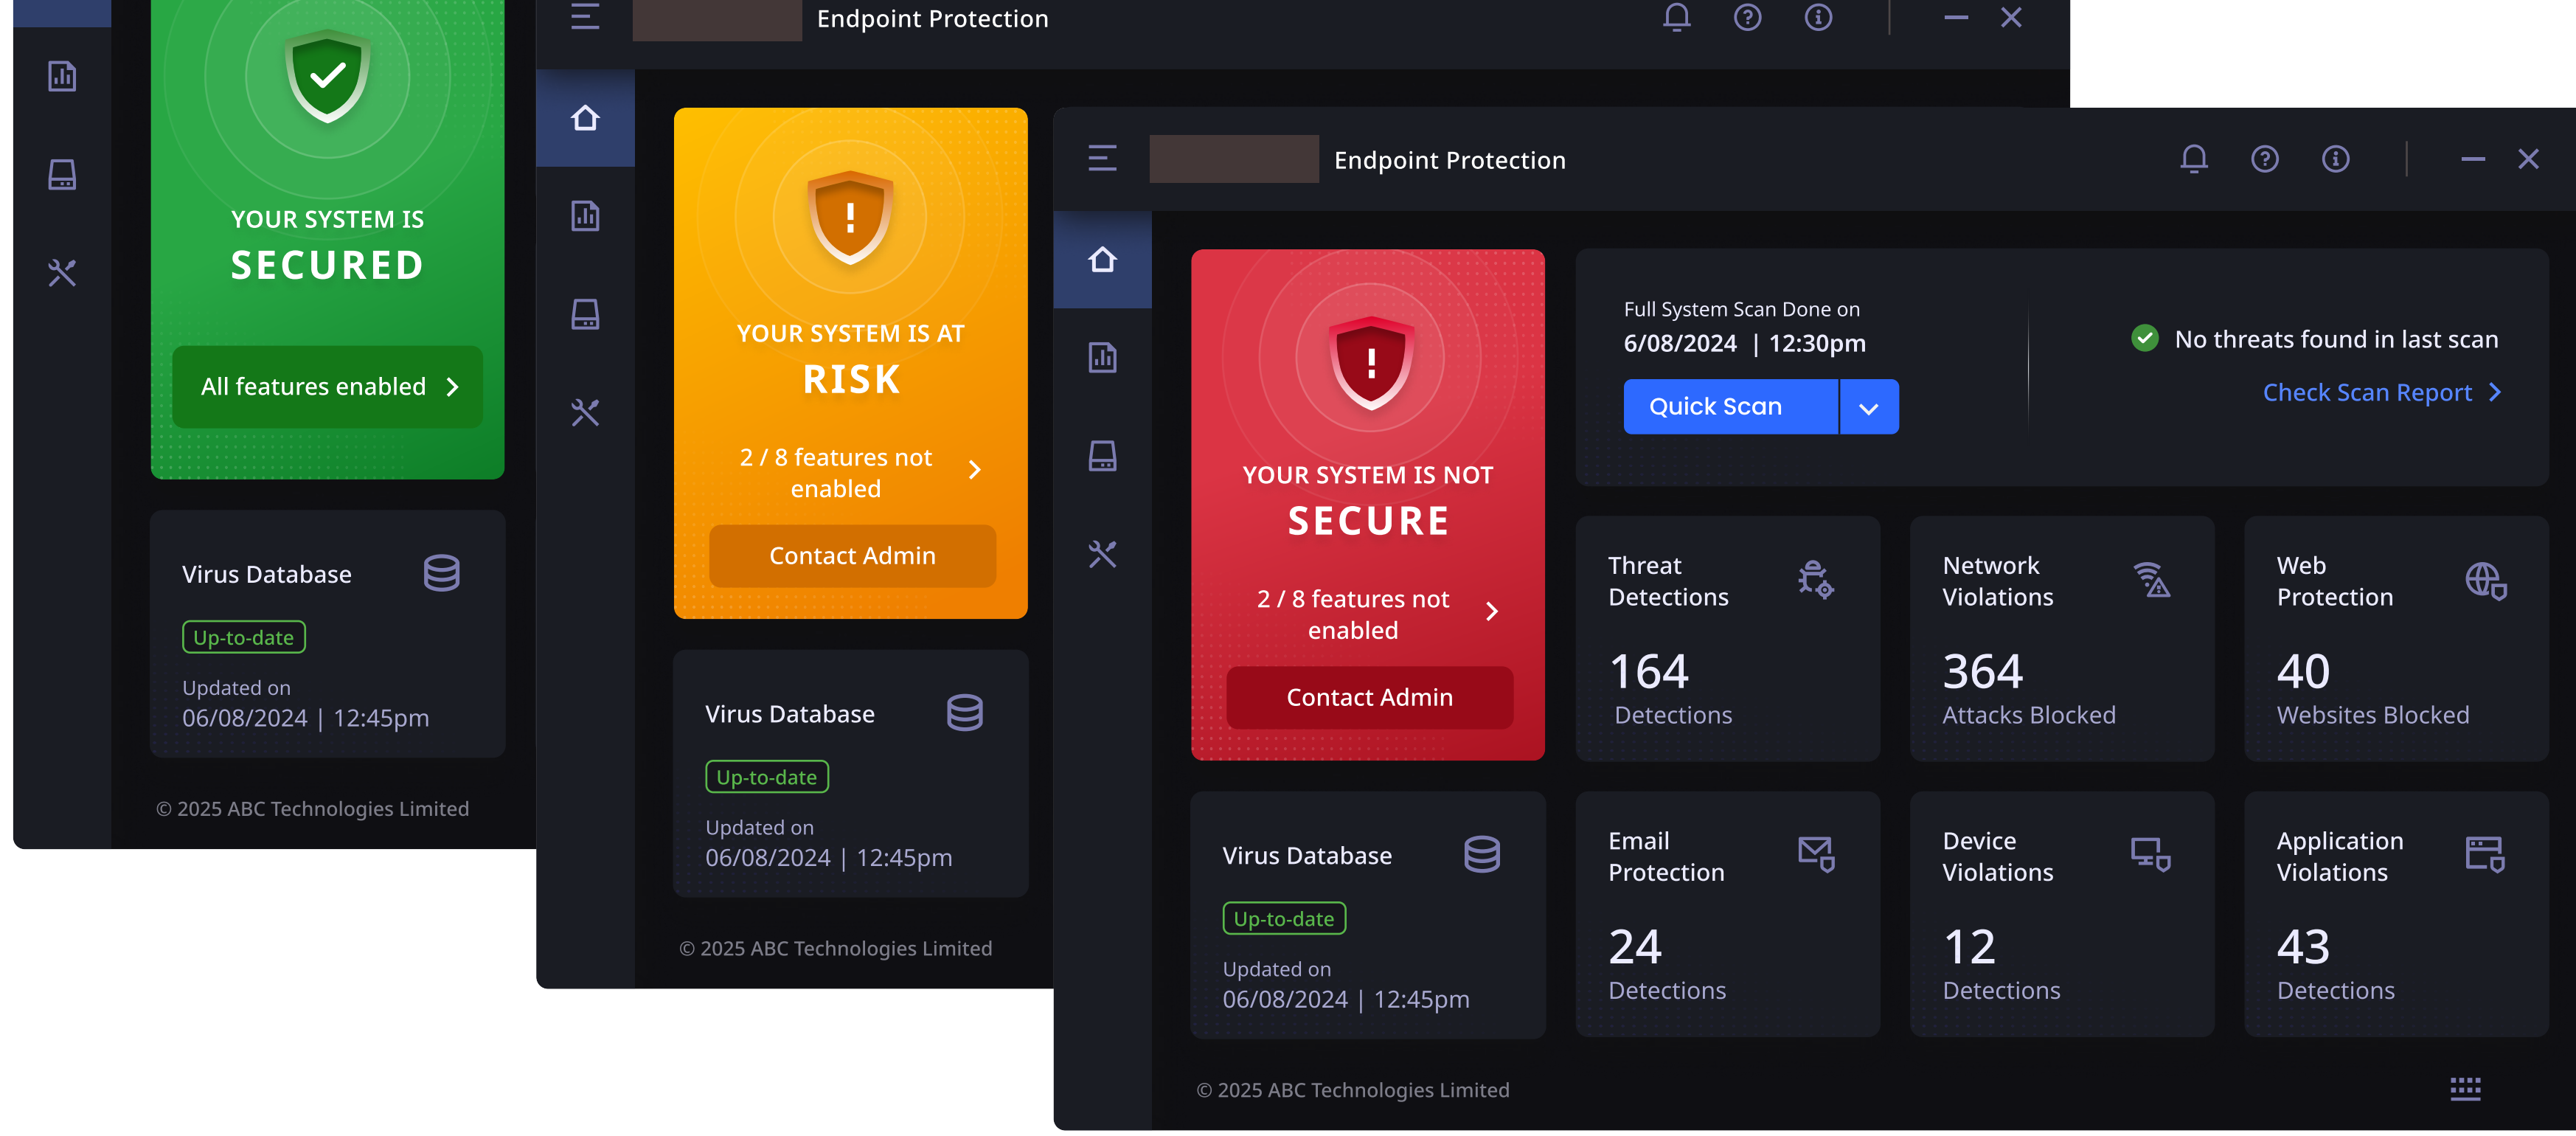

## Existing Designs

## Redesigned Experience

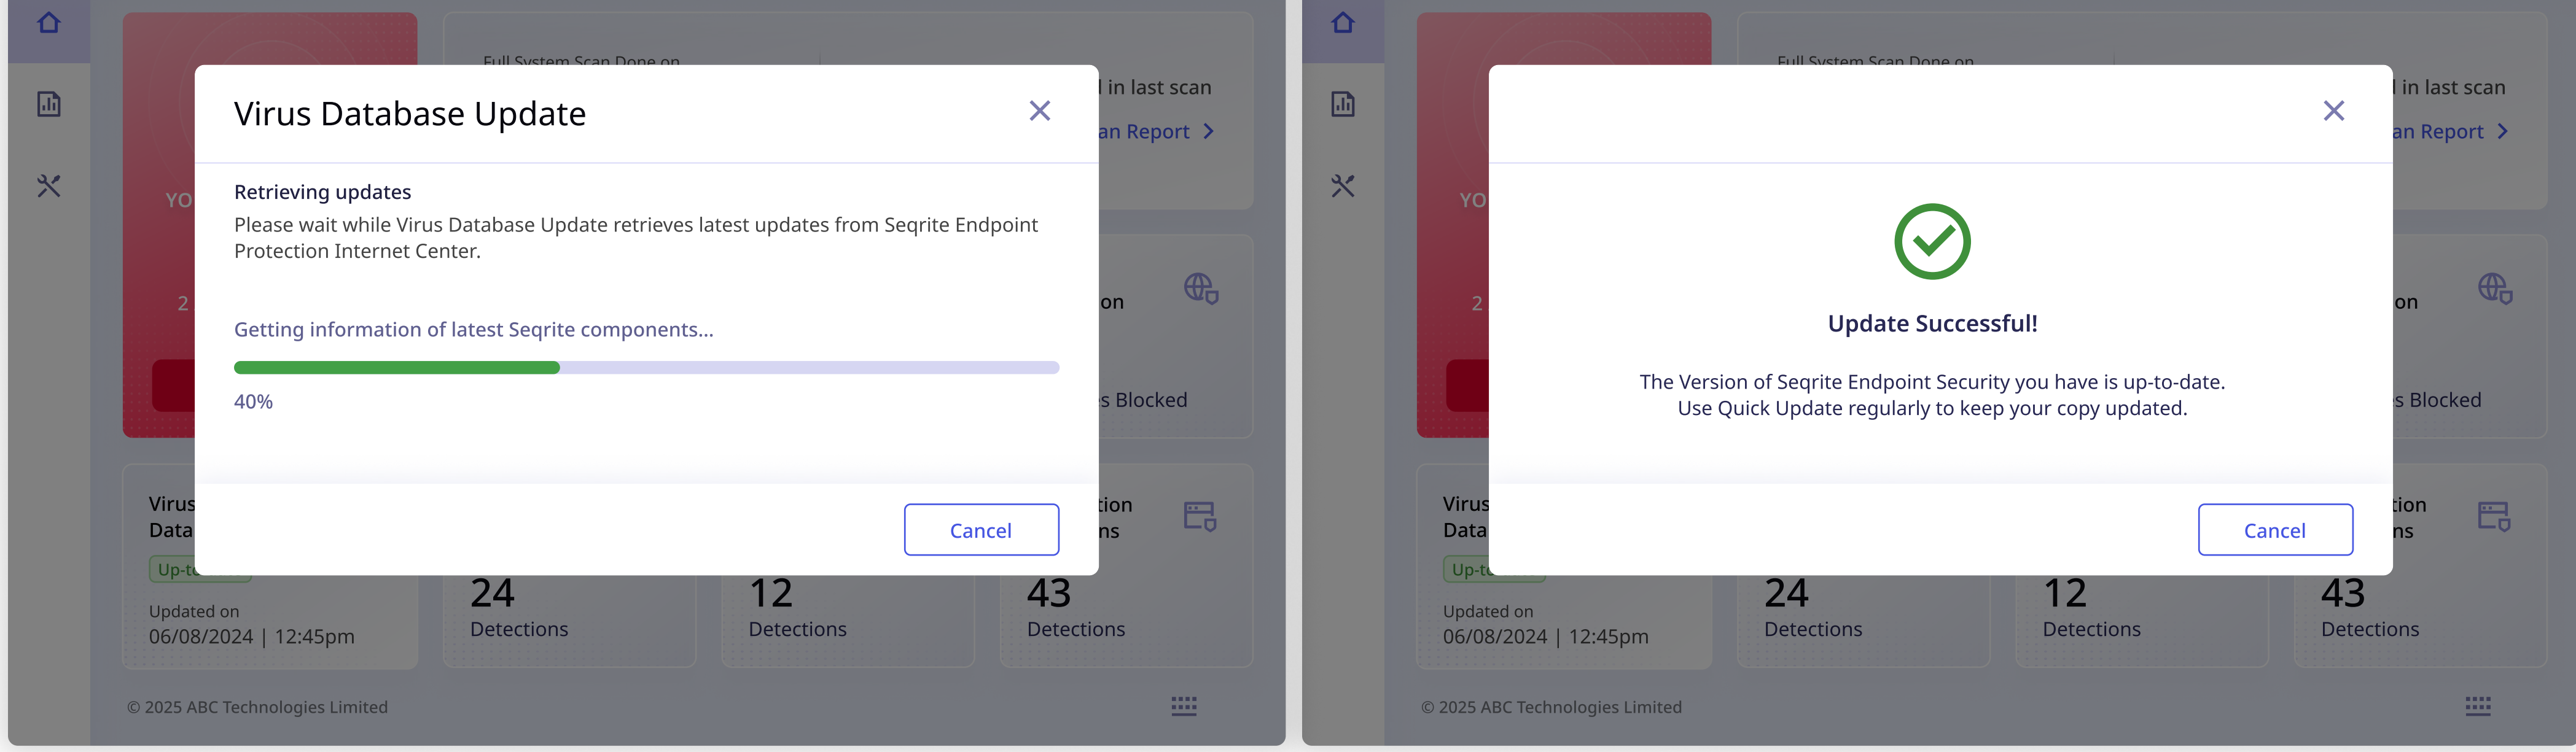

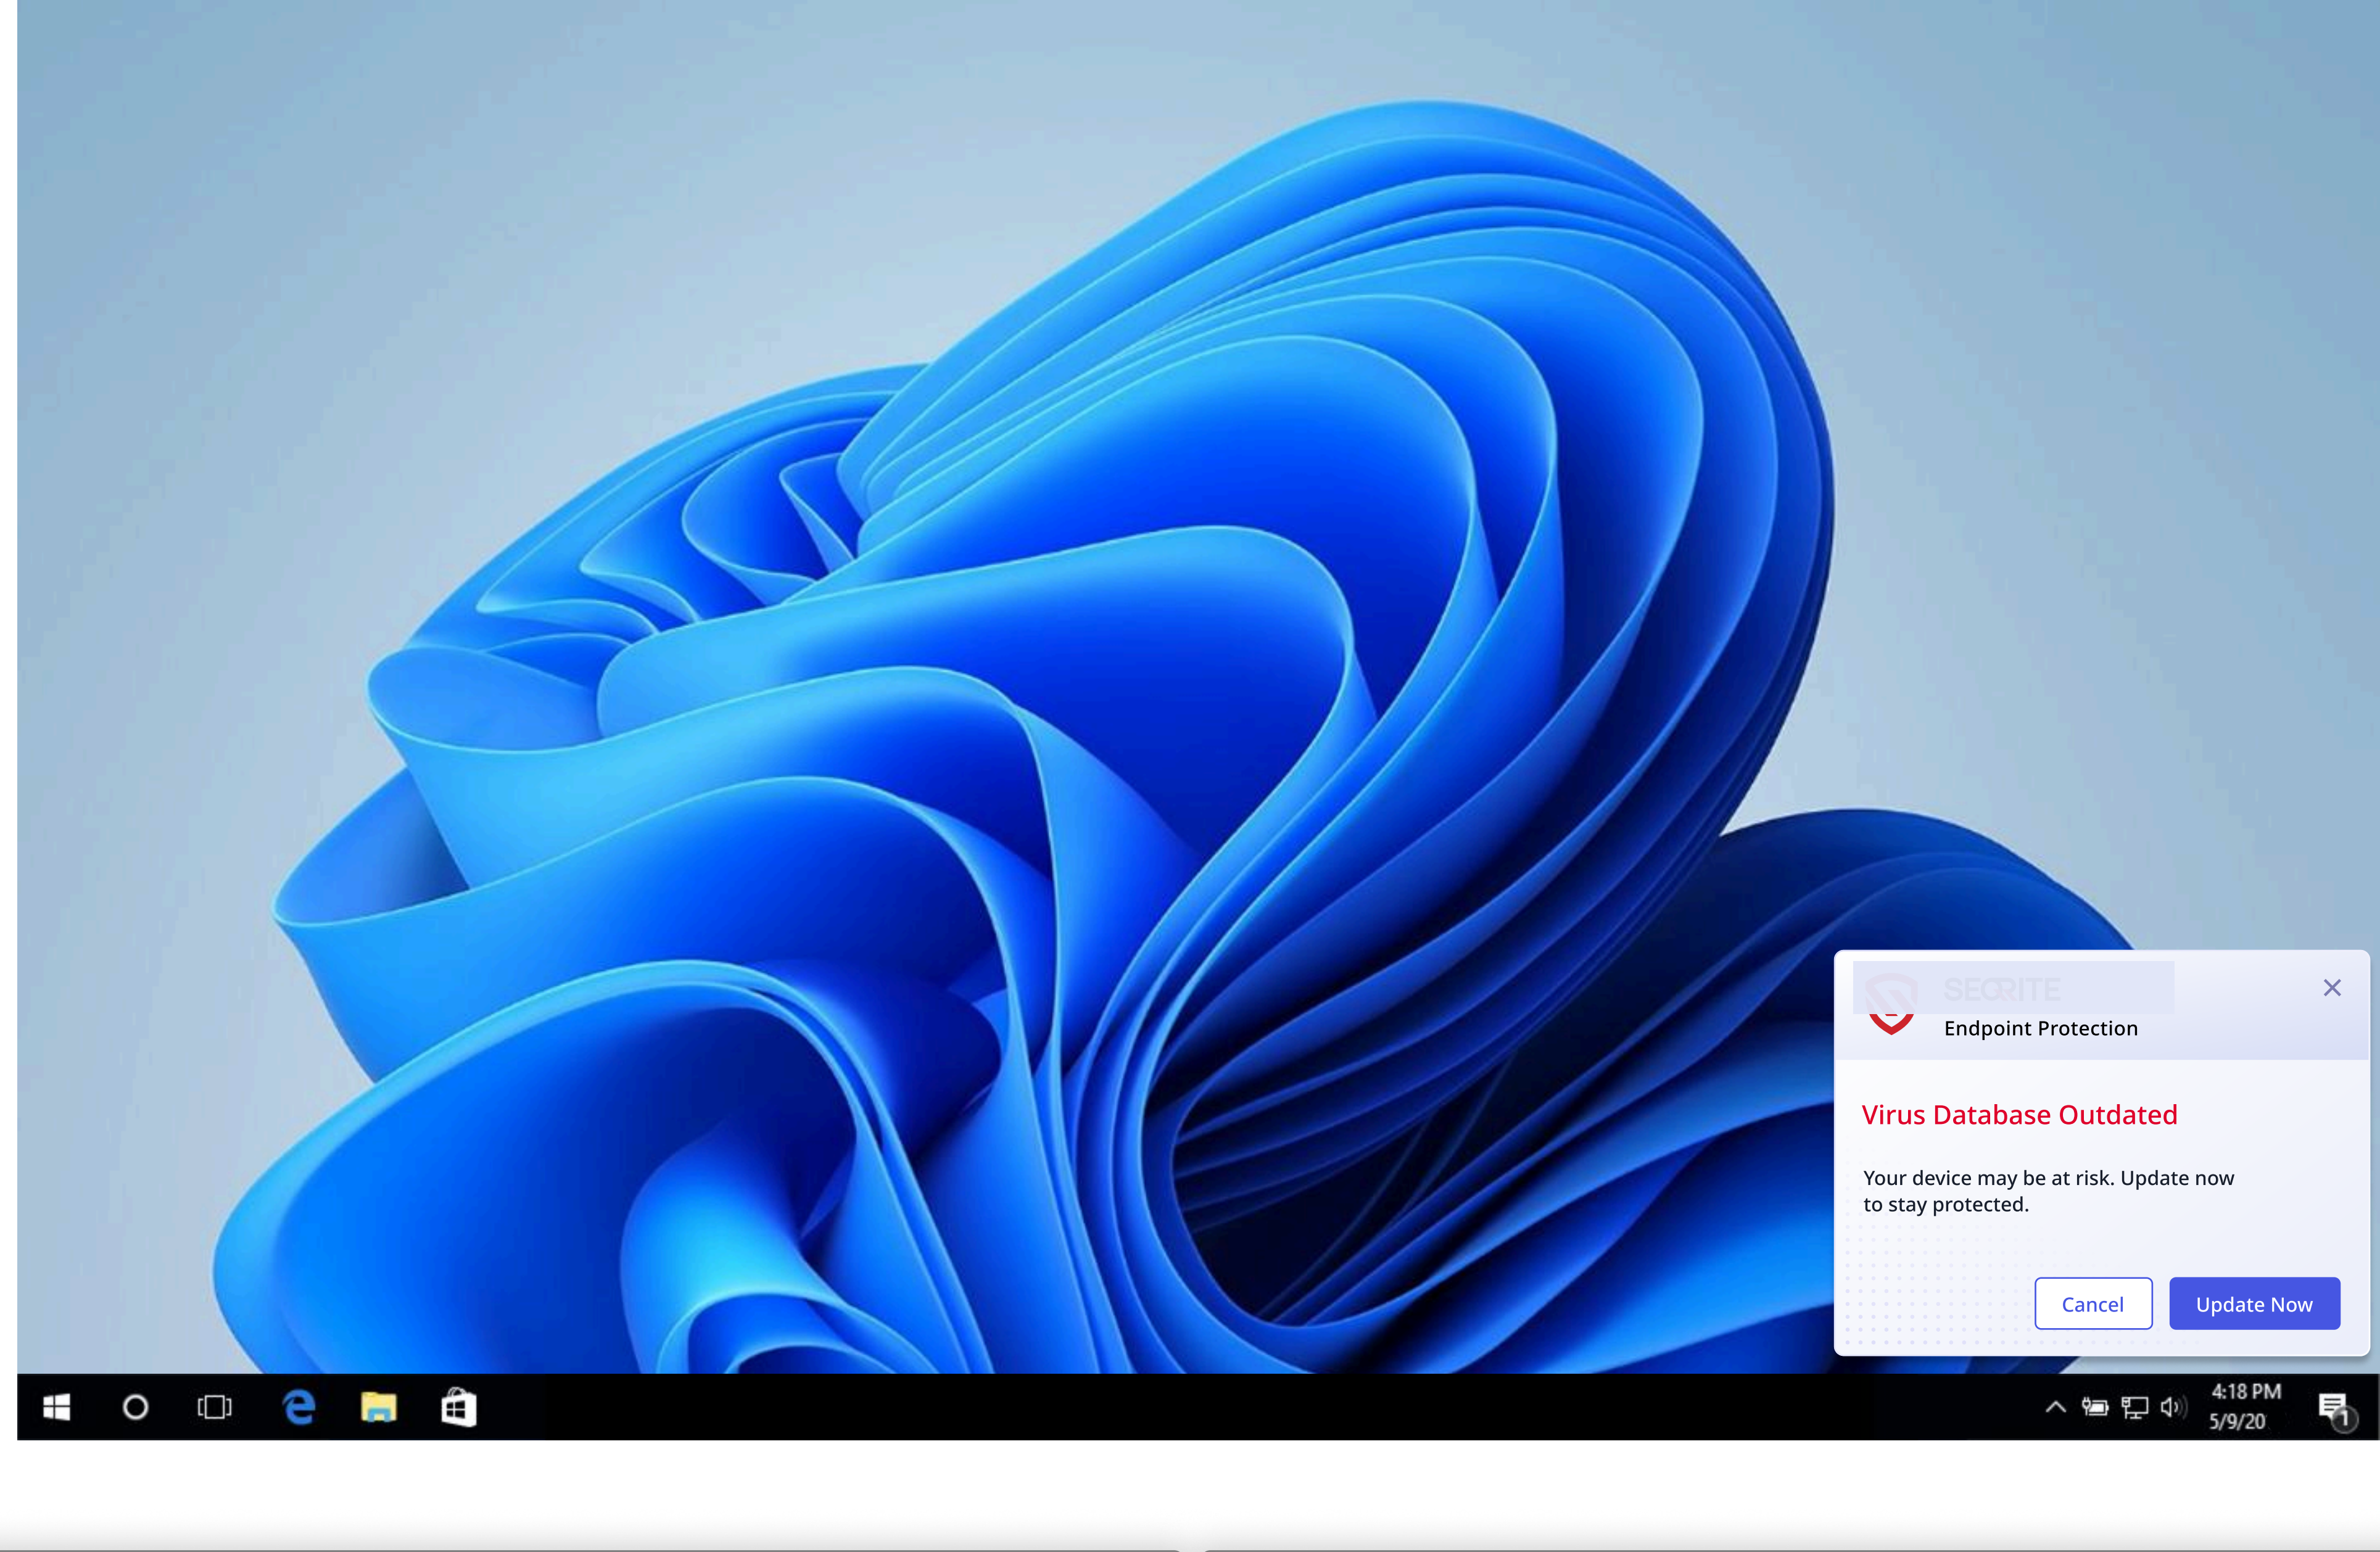

## Dark theme

## User Story

As a user, I want to update the virus database signature, so that my device is protected against the latest threats and malware.

## User Story

As a user, I want to perform a quick scan in Endpoint Protection, so that I can quickly check my device for any immediate threats without spending much time.
